juice of the grape. Wherefore since human nature has incurred the defect of the necessity of death, it cannot return to immortality save by means of death. It is also in keeping with the order of nature for another reason, because, as it is stated in Phys. viii, 1, "the movement of heaven is as a kind of life to all existing in nature," just as the movement of the heart is a kind of life of the whole body: wherefore even as all the members become dead on the heart ceasing to move, so when the heavenly movement ceases nothing can remain living with that life which was sustained by the influence of that movement. Now such is the life by which we live now: and therefore it follows that those who shall live after the movement of the heaven comes to a standstill must depart from this life.

Reply to Objection 1: This distinction of the dead and the living does not apply to the time itself of the judgment, nor to the whole preceding time, since all who are to be judged were living at some time, and dead at some time: but it applies to that particular time which shall precede the judgment immediately, when, to wit, the signs of the judgment shall begin to appear.

Reply to Objection 2: The perfect desire of the saints cannot be void; but nothing prevents their conditional desire being void. Such is the desire whereby we would not be "unclothed," but "clothed upon," namely if that be possible: and this desire is called by some a "velleity."

Reply to Objection 3: It is erroneous to say that any one except Christ is conceived without original sin, because those who would be conceived without original sin would not need the redemption which was wrought by Christ, and thus Christ would not be the Redeemer of all men [*See Editor's note which follows TP, Q[26]]. Nor can it be said that they needed not this redemption, because it was granted to them that they should be conceived without sin. For, this grace was vouchsafed---either to their parents, that the sin of nature might be healed in them (because so long as that sin remained they were unable to beget without communicating original sin)---or to nature itself which was healed. Now we must allow that every one needs the redemption of Christ personally, and not only by reason of nature, and one cannot be delivered from an evil or absolved from a debt unless one incur the debt or incur the evil: and consequently all could not reap in themselves the fruit of the Lord's prayer, unless all were born debtors and subject to evil. Hence the forgiveness of debts or delivery from evil cannot be applied to one who is born without a debt or free from evil, but only to one who is born with a debt and is afterwards delivered by the grace of Christ. Nor does it follow, if it can be asserted without error that some die not, that they are born without original sin, although death is a punishment of original sin; because God can of His mercy remit the punishment which one has incurred by a past fault, as He forgave the adulterous woman without punishment (Jn. 8): and in like manner He can deliver from death those who have contracted the debt of death by being born in original sin. And thus it does not follow that if they die not, therefore they were born without original sin.

Reply to Objection 4: The shortest way is not always the one to be chosen, but only when it is more or equally adapted for attaining the end. It is not so here, as is clear from what we have said.

Whether all will rise again from ashes?

Objection 1: It would seem that all will not rise again from ashes. For Christ's resurrection is the exemplar of ours. Yet His resurrection was not from ashes, for His flesh saw not corruption according to Ps. 15:10; Acts 2:27,31. Therefore neither will all rise again from ashes.

Objection 2: Further, the human body is not always burned. Yet a thing cannot be reduced to ashes unless it be burned. Therefore not all will rise again from ashes.

Objection 3: Further, the body of a dead man is not reduced to ashes immediately after death. But some will rise again at once after death, according to the text (Sent. iv, D, 43), namely those who will be found living. Therefore all will not rise again from ashes.

Objection 4: Further, the term "wherefrom" corresponds to the term "whereto." Now the term "whereto" of the resurrection is not the same in the good as in the wicked: "We shall all indeed rise again, but we shall not all be changed" (1 Cor. 15:51). Therefore the term "wherefrom" is not the same. And thus, if the wicked rise again from ashes, the good will not rise again from ashes.

On the contrary, Haymo says (on Rom. 5:10, "For if when we were enemies"): "All who are born in original sin lie under the sentence: Earth thou art and into earth shalt thou go." Now all who shall rise again at the general resurrection were born in original sin, either at their birth within the womb or at least at their birth from the womb. Therefore all will rise again from ashes.

Further, there are many things in the human body that do not truly belong to human nature. But all these will be removed. Therefore all bodies must needs be reduced to ashes.

I answer that, The same reasons by which we have shown (A[1]) that all rise again from death prove also that at the general resurrection all will rise again from ashes, unless the contrary, such as the hastening of their resurrection, be vouchsafed to certain persons by a special privilege of grace. For just as holy writ foretells the resurrection, so does it foretell the reformation of bodies (Phil. 3:21). And thus it follows that even as all die that the bodies of all may be able truly to rise again, so will the bodies of all perish that they may be able to be reformed. For just as death was inflicted by Divine justice as a punishment on man, so was the decay of the body, as appears from Gn. 3:19, "Earth thou art and into earth shalt thou go [*Vulg.: 'Dust thou art and into dust thou shalt return']."

Moreover the order of nature requires the dissolution not only of the union of soul and body, but also of the mingling of the elements: even as vinegar cannot be brought back to the quality of wine unless it first be dissolved into the prejacent matter: for the mingling of the elements is both caused and preserved by the movement of the heaven, and when this ceases all mixed bodies will be dissolved into pure elements.

Reply to Objection 1: Christ's resurrection is the exemplar of ours as to the term "whereto," but not as to the term "wherefrom."

Reply to Objection 2: By ashes we mean all the remains that are left after the dissolution of the body---for two reasons. First, because it was the common custom in olden times to burn the bodies of the dead, and to keep the ashes, whence it became customary to speak of the remains of a human body as ashes. Secondly, on account of the cause of dissolution, which is the flame of the fomes [*Cf. FS, Q[82], A[3]] whereby the human body is radically infected. Hence, in order to be cleansed of this infection the human body must needs be dissolved into its primary components: and when a thing is destroyed by fire it is said to be reduced to ashes. wherefore the name of ashes is given to those things into which the human body is dissolved.

Reply to Objection 3: The fire that will cleanse the face of the earth will be able to reduce suddenly to ashes the bodies of those that will be found living, even as it will dissolve other mixed bodies into their prejacent matter.

Reply to Objection 4: Movement does not take its species from its term "wherefrom" but from its term "whereto." Hence the resurrection of the saints which will be glorious must needs differ

from the resurrection of the wicked which will not be glorious, in respect of the term "whereto," and not in respect of the term "wherefrom." And it often happens that the term "whereto" is not the same, whereas the term "wherefrom" is the same---for instance, a thing may be moved from blackness to whiteness and to pallor.

Whether the ashes from which the human body will be restored have any natural inclination towards the soul which will be united to them?

Objection 1: It would seem that the ashes from which the human body will be restored will have a natural inclination towards the soul which will be united to them. For if they had no inclination towards the soul, they would stand in the same relation to that soul as other ashes. Therefore it would make no difference whether the body that is to be united to that soul were restored from those ashes or from others: and this is false.

Objection 2: Further, the body is more dependent on the soul than the soul on the body. Now the soul separated from the body is still somewhat dependent on the body, wherefore its movement towards God is retarded on account of its desire for the body, as Augustine says (Gen. ad lit. xii). Much more, therefore, has the body when separated from the soul, a natural inclination towards that soul.

Objection 3: Further, it is written (Job 20:11): "His bones shall be filled with the vices of his youth, and they shall sleep with him in the dust." But vices are only in the soul. Therefore there will still remain in those ashes a natural inclination towards the soul.

On the contrary, The human body can be dissolved into the very elements, or changed into the flesh of other animals. But the elements are homogeneous, and so is the flesh of a lion or other animal. Since then in the other parts of the elements or animals there is no natural inclination to that soul, neither will there be an inclination towards the soul in those parts into which the human body has been changed. The first proposition is made evident on the authority of Augustine (Enchiridion lxxxviii): "The human body, although changed into the substance of other bodies or even into the elements, although it has become the food and flesh of any animals whatsoever, even of man, will in an instant return to that soul which erstwhile animated it, making it a living and growing man."

Further, to every natural inclination there corresponds a natural agent: else nature would fail in necessaries. Now the aforesaid ashes cannot be reunited to the same soul by any natural agent. Therefore there is not in them any natural inclination to the aforesaid reunion.

I answer that, Opinion is threefold on this point. For some say that the human body is never dissolved into its very elements; and so there always remains in the ashes a certain force besides the elements, which gives a natural inclination to the same soul. But this assertion is in contradiction with the authority of Augustine quoted above, as well as with the senses and reason: since whatever is composed of contraries can be dissolved into its component parts. Wherefore others say that these parts of the elements into which the human body is dissolved retain more light, through having been united to the soul, and for this reason have a

natural inclination to human souls. But this again is nonsensical, since the parts of the elements are of the same nature and have an equal share of light and darkness. Hence we must say differently that in those ashes there is no natural inclination to resurrection, but only by the ordering of Divine

providence, which decreed that those ashes should be reunited to the soul: it is on this account that those parts of the elements shall be reunited and not others.

Hence the Reply to the First Objection is clear.

Reply to Objection 2: The soul separated from the body remains in the same nature that it has when united to the body. It is not so with the body, and consequently the comparison fails.

Reply to Objection 3: These words of Job do not mean that the vices actually remain in the ashes of the dead, but that they remain according to the ordering of Divine justice, whereby those ashes are destined to the restoration of the body which will suffer eternally for the sins committed.

OF THE CONDITIONS OF THOSE WHO RISE AGAIN, AND FIRST OF THEIR IDENTITY (THREE ARTICLES)

In the next place we must consider the conditions of those who rise again. Here we shall consider: (1) Those which concern the good and wicked in common; (2) those which concern the good only; (3) those which concern only the wicked. Three things concern the good and wicked in common, namely their identity, their integrity, and their quality: and we shall inquire (1) about their identity; (2) about their integrity; (3) about their quality.

Under the first head there are three points of inquiry:

(1) Whether the body will rise again identically the same?

(2) Whether it will be the self-same man?

(3) Whether it is necessary that the same ashes should return to the same parts in which they were before?

Whether in the resurrection the soul will be reunited to the same identical body?

Objection 1: It would seem that the soul will not be reunited to the same identical body at the resurrection, for "thou sowest not the body that shall be, but bare grain" (1 Cor. 15:37). Now the Apostle is there comparing death to sowing and resurrection to fructifying. Therefore the same body that is laid aside in death is not resumed at the resurrection.

Objection 2: Further, to every form some matter is adapted according to its condition, and likewise to every agent some instrument. Now the body is compared to the soul as matter to form, and as instrument to agent. Since then at the resurrection the soul will not be of the same condition as now (for it will be either entirely borne away to the heavenly life to which it adhered while living in the world, or will be cast down into the life of the brutes if it lived as a brute in this world) it would seem that it will not resume the same body, but either a heavenly or a brutish body.

Objection 3: Further, after death, as stated above (Q[78], A[3]), the human body is dissolved into the elements. Now these elemental parts into which the human body has been dissolved do not agree with the human body dissolved into them, except in primary matter, even as any other elemental parts agree with that same body. But if the body were to be formed from those other elemental parts, it would not be described as identically the same. Therefore neither will it be the self-same body if it be restored from these parts.

Objection 4: Further, there cannot be numerical identity where there is numerical distinction of essential parts. Now the form of the mixed body, which form is an essential part of the human

body, as being its form, cannot be resumed in numerical identity. Therefore the body will not be identically the same. The minor is proved thus: That which passes away into complete nonentity cannot be resumed in identity. This is clear from the fact that there cannot be identity where there is distinction of existence: and existence, which is the act of a being, is differentiated by being interrupted, as is any interrupted act. Now the form of a mixed body passes away into complete nonentity by death, since it is a bodily form, and so also do the contrary qualities from which the mixture results. Therefore the form of a mixed body does not return in identity.

On the contrary, It is written (Job 19:26): "In my flesh I shall see God my Saviour [Vulg.: 'my God']," where he is speaking of the vision after the resurrection, as appears from the preceding words: "In the last day I shall rise out of the earth." Therefore the selfsame body will rise again.

Further, the Damascene says (De Fide Orth. iv, 27): "Resurrection is the second rising of that which has fallen." But the body which we have now fell by death. Therefore it will rise again the same identically.

I answer that, on this point the philosophers erred and certain modern heretics err. For some of the philosophers allowed that souls separated from bodies are reunited to bodies, yet they erred in this in two ways. First, as to the mode of reunion, for some held the separated soul to be naturally reunited to a body by the way of generation. Secondly, as to the body to which it was reunited, for they held that this second union was not with the selfsame body that was laid aside in death, but with another, sometimes of the same, sometimes of a different species. Of a different species when the soul while existing in the body had led a life contrary to the ordering of reason: wherefore it passed after death from the body of a man into the body of some other animal to whose manner of living it had conformed in this life, for instance into the body of a dog on account of lust, into the body of a lion on account of robbery and violence, and so forth---and into a body of the same species when the soul has led a good life in the body, and having after death experienced some happiness, after some centuries began to wish to return to the body; and thus it was reunited to a human body.

This opinion arises from two false sources. The first of these is that they said that the soul is not united to the body essentially as form to matter, but only accidentally, as mover to the thing moved, [*Cf. FP, Q[76], A[1]] or as a man to his clothes. Hence it was possible for them to maintain that the soul pre-existed before being infused into the body begotten of natural generation, as also that it is united to various bodies. The second is that they held intellect not to differ from sense except accidentally, so that man would be said to surpass other animals in intelligence, because the sensitive power is more acute in him on account of the excellence of his bodily complexion; and hence it was possible for them to assert that man's soul passes into the soul of a brute animal, especially when the human soul has been habituated to brutish actions. But these two sources are refuted by the Philosopher (De Anima ii, 1), and in consequence of these being refuted, it is clear that the above opinion is false.

In like manner the errors of certain heretics are refuted. Some of them fell into the aforesaid opinions of the philosophers: while others held that souls are reunited to heavenly bodies, or again to bodies subtle as the wind, as Gregory relates of a certain Bishop of Constantinople, in his exposition of Job 19:26, "In my flesh I shall see my God," etc. Moreover these same errors of heretics may be refuted by the fact that they are prejudicial to the truth of resurrection as witnessed to by Holy Writ. For we cannot call it resurrection unless the soul return to the same body, since resurrection is a second rising, and the same thing rises that falls: wherefore resurrection regards the body which after death falls rather than the soul which after death lives. And consequently if

it be not the same body which the soul resumes, it will not be a resurrection, but rather the assuming of a new body.

Reply to Objection 1: A comparison does not apply to every particular, but to some. For in the sowing of grain, the grain sown and the grain that is born thereof are neither identical, nor of the same condition, since it was first sown without a husk, yet is born with one: and the body will rise again identically the same, but of a different condition, since it was mortal and will rise in immortality.

Reply to Objection 2: The soul rising again and the soul living in this world differ, not in essence but in respect of glory and misery, which is an accidental difference. Hence it follows that the body in rising again differs, not in identity, but in condition, so that a difference of bodies corresponds proportionally to the difference of souls.

Reply to Objection 3: That which is understood as though it were in matter before its form remains in matter after corruption, because when that which comes afterwards is removed that which came before may yet remain. Now, as the Commentator observes on the First Book of Physics and in De Substantia Orbis, in the matter of things subject to generation and corruption, we must presuppose undeterminate dimensions, by reason of which matter is divisible, so as to be able to receive various forms in its various parts. Wherefore after the separation of the substantial form from matter, these dimensions still remain the same: and consequently the matter existing under those dimensions, whatever form it receive, is more identified with that which was generated from it, than any other part of matter existing under any form whatever. Thus the matter that will be brought back to restore the human body will be the same as that body's previous matter.

Reply to Objection 4: Even as a simple quality is not the substantial form of an element, but its proper accident, and the disposition whereby its matter is rendered proper to such a form; so the form of a mixed body, which form is a quality resulting from simple qualities reduced to a mean, is not the substantial form of the mixed body, but its proper accident, and the disposition whereby the matter is in need of the form. Now the human body has no substantial form besides this form of the mixed body, except the rational soul, for if it had any previous substantial form, this would give it substantial being, and would establish it in the genus of substance: so that the soul would be united to a body already established in the genus of substance, and thus the soul would be compared to the body as artificial forms are to their matter, in respect of their being established in the genus of substance by their matter. Hence the union of the soul to the body would be accidental, which is the error of the ancient philosophers refuted by the Philosopher (De Anima ii, 2 [*Cf. FP, Q[76], A[1]]). It would also follow that the human body and each of its parts would not retain their former names in the same sense, which is contrary to the teaching of the Philosopher (De Anima ii, 1). Therefore since the rational soul remains, no substantial form of the human body falls away into complete nonentity. And the variation of accidental forms does not make a difference of identity. Therefore the selfsame body will rise again, since the selfsame matter is resumed as stated in a previous reply (ad 2).

Whether it will be identically the same man that shall rise again?

Objection 1: It would seem that it will not be identically the same man that shall rise again. For according to the Philosopher (De Gener. ii): "Whatsoever things are changed in their corruptible

substance are not repeated identically." Now such is man's substance in his present state. Therefore after the change wrought by death the self-same man cannot be repeated .

Objection 2: Further, where there is a distinction of human nature there is not the same identical man: wherefore Socrates and Plato are two men and not one man, since each has his own distinct human nature. Now the human nature of one who rises again is distinct from that which he has now. Therefore he is not the same identical man. The minor can be proved in two ways. First, because human nature which is the form of the whole is not both form and substance as the soul is, but is a form only. Now such like forms pass away into complete nonentity, and consequently they cannot be restored. Secondly, because human nature results from union of parts. Now the same identical union as that which was heretofore cannot be resumed, because repetition is opposed to identity, since repetition implies number, whereas identity implies unity, and these are incompatible with one another. But resurrection is a repeated union: therefore the union is not the same, and consequently there is not the same human nature nor the same man.

Objection 3: Further, one same man is not several animals: wherefore if it is not the same animal it is not the same identical man. Now where sense is not the same, there is not the same animal, since animal is defined from the primary sense, namely touch. But sense, as it does not remain in the separated soul (as some maintain), cannot be resumed in identity. Therefore the man who rises again will not be the same identical animal, and consequently he will not be the same man.

Objection 4: Further, the matter of a statue ranks higher in the statue than the matter of a man does in man: because artificial things belong to the genus of substance by reason of their matter, but natural things by reason of their form, as appears from the Philosopher (Phys. ii, 1), and again from the Commentator (De Anima ii). But if a statue is remade from the same brass, it will not be the same identically. Therefore much less will it be identically the same man if he be reformed from the same ashes.

On the contrary, It is written (Job 19:27): "Whom I myself shall see . . . and not another," and he is speaking of the vision after the resurrection. Therefore the same identical man will rise again.

Further, Augustine says (De Trin. viii, 5) that "to rise again is naught else but to live again." Now unless the same identical man that died return to life, he would not be said to live again. Therefore he would not rise again, which is contrary to faith.

I answer that, The necessity of holding the resurrection arises from this---that man may obtain the last end for which he was made; for this cannot be accomplished in this life, nor in the life of the separated soul, as stated above (Q[75], AA[1],2): otherwise man would have been made in vain, if he were unable to obtain the end for which he was made. And since it behooves the end to be obtained by the selfsame thing that was made for that end, lest it appear to be made without purpose, it is necessary for the selfsame man to rise again; and this is effected by the selfsame soul being united to the selfsame body. For otherwise there would be no resurrection properly speaking, if the same man were not reformed. Hence to maintain that he who rises again is not the selfsame man is heretical, since it is contrary to the truth of Scripture which proclaims the resurrection.

Reply to Objection 1: The Philosopher is speaking of repetition by movement or natural change. For he shows the difference between the recurrence that occurs in generation and corruption and that which is observed in the movement of the heavens. Because the selfsame heaven by local movement returns to the beginning of its movement, since it has a moved incorruptible substance. On the other hand, things subject to generation and corruption return by generation to specific but

not numerical identity, because from man blood is engendered, from blood seed, and so on until a man is begotten, not the selfsame man, but the man specifically. In like manner from fire comes air, from air water, from water earth, whence fire is produced, not the selfsame fire, but the same in species. Hence it is clear that the argument, so far as the meaning of the Philosopher is concerned, is not to the point.

We may also reply that the form of other things subject to generation and corruption is not subsistent of itself, so as to be able to remain after the corruption of the composite, as it is with the rational soul. For the soul, even after separation from the body, retains the being which accrues to it when in the body, and the body is made to share that being by the resurrection, since the being of the body and the being of the soul in the body are not distinct from one another, otherwise the union of soul and body would be accidental. Consequently there has been no interruption in the substantial being of man, as would make it impossible for the self-same man to return on account of an interruption in his being, as is the case with other things that are corrupted, the being of which is interrupted altogether, since their form remains not, and their matter remains under another being.

Nevertheless neither does the self-same man recur by natural generation, because the body of the man begotten is not composed of the whole body of his begetter: hence his body is numerically distinct, and consequently his soul and the whole man.

Reply to Objection 2: There are two opinions about humanity and about any form of a whole. For some say that the form of the whole and the form of the part are really one and the same: but that it is called the form of the part inasmuch as it perfects the matter, and the form of the whole inasmuch as the whole specific nature results therefrom. According to this opinion humanity is really nothing else than the rational soul: and so, since the selfsame rational soul is resumed, there will be the same identical humanity, which will remain even after death, albeit not under the aspect of humanity, because the composite does not derive the specific nature from a separated humanity.

The other opinion, which seems nearer the truth, is Avicenna's, according to whom the form of the whole is not the form of a part only, nor some other form besides the form of the part, but is the whole resulting from the composition of form and matter, embracing both within itself. This form of the whole is called the essence or quiddity. Since then at the resurrection there will be the selfsame body, and the selfsame rational soul, there will be, of necessity, the same humanity.

The first argument proving that there will be a distinction of humanity was based on the supposition that humanity is some distinct form supervening form and matter; which is false.

The second reason does not disprove the identity of humanity, because union implies action or passion, and though there be a different union, this cannot prevent the identity of humanity, because the action and passion from which humanity resulted are not of the essence of humanity, wherefore a distinction on their part does not involve a distinction of humanity: for it is clear that generation and resurrection are not the self-same movement. Yet the identity of the rising man with the begotten man is not hindered for this reason: and in like manner neither is the identity of humanity prevented if we take union for the relation itself: because this relation is not essential to but concomitant with humanity, since humanity is not one of those forms that are composition or order (Phys. ii, 1), as are the forms of things produced by art, so that if there be another distinct composition there is another distinct form of a house.

Reply to Objection 3: This argument affords a very good proof against those who held a distinction between the sensitive and rational souls in man: because in that case the sensitive soul in man would not be incorruptible, as neither is it in other animals; and consequently in the

resurrection there would not be the same sensitive soul, and consequently neither the same animal nor the same man.

But if we assert that in man the same soul is by its substance both rational and sensitive, we shall encounter no difficulty in this question, because animal is defined from sense, i.e. the sensitive soul as from its essential form: whereas from sense, i.e. the sensitive power, we know its definition as from an accidental form "that contributes more than another to our knowledge of the quiddity" (De Anima i, 1). Accordingly after death there remains the sensitive soul, even as the rational soul, according to its substance: whereas the sensitive powers, according to some, do not remain. And since these powers are accidental properties, diversity on their part cannot prevent the identity of the whole animal, not even of the animal's parts: nor are powers to be called perfections or acts of organs unless as principles of action, as heat in fire.

Reply to Objection 4: A statue may be considered in two ways, either as a particular substance, or as something artificial. And since it is placed in the genus of substance by reason of its matter, it follows that if we consider it as a particular substance, it is the selfsame statue that is remade from the same matter. On the other hand, it is placed in the genus of artificial things inasmuch as it has an accidental form which, if the statue be destroyed, passes away also. Consequently it does not return identically the same, nor can the statue be identically the same. But man's form, namely the soul, remains after the body has perished: wherefore the comparison fails.

Whether the ashes of the human body must needs, by the resurrection, return to the same parts of the body that were dissolved into them?

Objection 1: It would seem necessary for the ashes of the human body to return, by the resurrection, to the same parts that were dissolved into them. For, according to the Philosopher, "as the whole soul is to the whole body, so is a part of the soul to a part of the body, as sight to the pupil" (De Anima ii, 1). Now it is necessary that after the resurrection the body be resumed by the same soul. Therefore it is also necessary for the same parts of the body to return to the same limbs, in which they were perfected by the same parts of the soul.

Objection 2: Further, difference of matter causes difference of identity. But if the ashes return not to the same parts, each part will not be remade from the same matter of which it consisted before. Therefore they will not be the same identically. Now if the parts are different the whole will also be different, since parts are to the whole as matter is to form (Phys. ii, 3). Therefore it will not be the self-same man; which is contrary to the truth of the resurrection.

Objection 3: Further, the resurrection is directed to the end that man may receive the meed of his works. Now different parts of the body are employed in different works, whether of merit or of demerit. Therefore at the resurrection each part must needs return to its former state that it may be rewarded in due measure.

On the contrary, Artificial things are more dependent on their matter than natural things. Now in artificial things, in order that the same artificial thing be remade, from the same matter, there is no need for the parts to be brought back to the same position. Neither therefore is it necessary in man.

Further, change of an accident does not cause a change of identity. Now the situation of parts is an accident. Therefore its change in a man does not cause a change of identity.

I answer that, In this question it makes a difference whether we ask what can be done without prejudice to identity, and what will be done for the sake of congruity. As regards the first it must be observed that in man we may speak of parts in two ways: first as of the various parts of a homogeneous whole, for instance the various parts of flesh, or the various parts of bone; secondly, as of various parts of various species of a heterogeneous whole, for instance bone and flesh. Accordingly if it be said that one part of matter will return to another part of the same species, this causes no change except in the position of the parts: and change of position of parts does not change the species in homogeneous wholes: and so if the matter of one part return to another part, this is nowise prejudicial to the identity of the whole. Thus is it in the example given in the text (Sent. iv, D, 44), because a statue, after being remade, is identically the same, not as to its form, but as to its matter, in respect of which it is a particular substance, and in this way a statue is homogeneous, although it is not according to its artificial form. But if it be said that the matter of one part returns to another part of another species, it follows of necessity that there is a change not only in the position of parts, but also in their identity: yet so that the whole matter, or something belonging to the truth of human nature in one is transferred to another. but not if what was superfluous in one part is transferred to another. Now the identity of parts being taken away, the identity of the whole is removed, if we speak of essential parts, but not if we speak of accidental parts, such as hair and nails, to which apparently Augustine refers (De Civ. Dei xxii). It is thus clear how the transference of matter from one part of another destroys the identity, and how it does not.

But speaking of the congruity, it is more probable that even the parts will retain their position at the resurrection, especially as regards the essential and organic parts, although perhaps not as regards the accidental parts, such as nails and hair.

Reply to Objection 1: This argument considers organic or heterogeneous parts, but no homogeneous or like parts.

Reply to Objection 2: A change in the position of the parts of matter does not cause a change of identity, although difference of matter does.

Reply to Objection 3: Operation, properly speaking, is not ascribed to the part but to the whole, wherefore the reward is due, not to the part but to the whole.

OF THE INTEGRITY OF THE BODIES IN THE RESURRECTION (FIVE ARTICLES)

We must next consider the integrity of the bodies in the resurrection. Under this head there are five points of inquiry:

(1) Whether all the members of the human body will rise again therein?

(2) Whether the hair and nails will?

(3) Whether the humors will?

(4) Whether whatever the body contained belonging to the truth of human nature will rise again?

(5) Whether whatever it contained materially will rise again?

Whether all the members of the human body will rise again?

Objection 1: It would seem that not all the members of the human body will rise again. For if the end be done away it is useless to repair the means. Now the end of each member is its act. Since

then nothing useless is done in the Divine works, and since the use of certain members is not fitting to man after the resurrection, especially the use of the genital members, for then they "shall neither marry, nor be married" (Mat. 22:30), it would seem that not all the members shall rise again.

Objection 2: Further, the entrails are members: and yet they will not rise again. For they can neither rise full, since thus they contain impurities, nor empty, since nothing is empty in nature. Therefore the members shall not all rise again.

Objection 3: Further, the body shall rise again that it may be rewarded for the works which the soul did through it. Now the member of which a thief has been deprived for theft, and who has afterwards done penance and is saved, cannot be rewarded at the resurrection, neither for any good deed, since it has not co-operated in any, nor for evil deeds, since the punishment of the member would redound to the punishment of man. Therefore the members will not all rise again.

On the contrary, The other members belong more to the truth of human nature than hair and nails. Yet these will be restored to man at the resurrection according to the text (Sent. iv, D, 4). Much more therefore does this apply to the other members.

Further, "The works of God are perfect" (Dt. 32:4). But the resurrection will be the work of God. Therefore man will be remade perfect in all his members.

I answer that, As stated in De Anima ii, 4, "the soul stands in relation to the body not only as its form and end, but also as efficient cause." For the soul is compared to the body as art to the thing made by art, as the Philosopher says (De Anim. Gener. ii, 4), and whatever is shown forth explicitly in the product of art is all contained implicitly and originally in the art. In like manner whatever appears in the parts of the body is all contained originally and, in a way, implicitly in the soul. Thus just as the work of an art would not be perfect, if its product lacked any of the things contained in the art, so neither could man be perfect, unless the whole that is contained enfolded in the soul be outwardly unfolded in the body, nor would the body correspond in full proportion to the soul. Since then at the resurrection it behooves man's body to correspond entirely to the soul, for it will not rise again except according to the relation it bears to the rational soul, it follows that man also must rise again perfect, seeing that he is thereby repaired in order that he may obtain his ultimate perfection. Consequently all the members that are now in man's body must needs be restored at the resurrection.

Reply to Objection 1: The members may be considered in two ways in relation to the soul: either according to the relation of matter to form, or according to the relation of instrument to agent, since "the whole body is compared to the whole soul in the same way as one part is to another" (De Anima ii, 1). If then the members be considered in the light of the first relationship, their end is not operation, but rather the perfect being of the species, and this is also required after the resurrection: but if they be considered in the light of the second relationship, then their end is operation. And yet it does not follow that when the operation fails the instrument is useless, because an instrument serves not only to accomplish the operation of the agent, but also to show its virtue. Hence it will be necessary for the virtue of the soul's powers to be shown in their bodily instruments, even though they never proceed to action, so that the wisdom of God be thereby glorified.

Reply to Objection 2: The entrails will rise again in the body even as the other members: and they will be filled not with vile superfluities but with goodly humors.

Reply to Objection 3: The acts whereby we merit are not the acts, properly speaking, of hand or foot but of the whole man; even as the work of art is ascribed not to the instrument but to the craftsman. Therefore though the member which was cut off before a man's repentance did not

co-operate with him in the state wherein he merits glory, yet man himself merits that the whole man may be rewarded, who with his whole being serves God.

Whether the hair and nails will rise again in the human body?

Objection 1: It would seem that the hair and nails will not rise again in the human body. For just as hair and nails result from the surplus of food, so do urine, sweat and other superfluities or dregs. But these will not rise again with the body. Neither therefore will hair and nails.

Objection 2: Further, of all the superfluities that are produced from food, seed comes nearest to the truth of human nature, since though superfluous it is needed. Yet seed will not rise again in the human body. Much less therefore will hair and nails.

Objection 3: Further, nothing is perfected by a rational soul that is not perfected by a sensitive soul. But hair and nails are not perfected by a sensitive soul, for "we do not feel with them" (De Anima i, 5; iii, 13). Therefore since the human body rises not again except because it is perfected by a rational soul, it would seem that the hair and nails will not rise again.

On the contrary, It is written (Lk. 21:18): "A hair of your head shall not perish."

Further, hair and nails were given to man as an ornament. Now the bodies of men, especially of the elect, ought to rise again with all their adornment. Therefore they ought to rise again with the hair.

I answer that, The soul is to the animated body, as art is to the work of art, and is to the parts of the body as art to its instruments: wherefore an animated body is called an organic body. Now art employs certain instruments for the accomplishment of the work intended, and these instruments belong to the primary intention of art: and it also uses other instruments for the safe-keeping of the principal instruments, and these belong to the secondary intention of art: thus the art of warfare employs a sword for fighting, and a sheath for the safe-keeping of the sword. And so among the parts of an animated body, some are directed to the accomplishment of the souls' operations, for instance the heart, liver, hand, foot; while others are directed to the safe-keeping of the other parts as leaves to cover fruit; and thus hair and nails are in man for the protection of other parts. Consequently, although they do not belong to the primary perfection of the human body, they belong to the secondary perfection: and since man will rise again with all the perfections of his nature, it follows that hair and nails will rise again in him.

Reply to Objection 1: Those superfluities are voided by nature, as being useful for nothing. Hence they do not belong to the perfection of the human body. It is not so with the superfluities which nature reserves for the production of hair and nails which she needs for the protection of the members.

Reply to Objection 2: Seed is not required for the perfection of the individual, as hair and nails are, but only for the protection of the species.

Reply to Objection 3: Hair and nails are nourished and grow, and so it is clear that they share in some operation, which would not be possible unless they were parts in some way perfected by the soul. And since in man there is but one soul, namely the rational soul, it is clear that they are perfected by the rational soul, although not so far as to share in the operation of sense, as neither do bones, and yet it is certain that these will rise again and that they belong to the integrity of the individual.
