Accordingly we must say that the obstacle to our body's being now in the same place with another body can nowise be removed by the gift of subtlety. For nothing can prevent a body from occupying the same place together with another body, except something in it that requires a different place: since nothing is an obstacle to identity, save that which is a cause of distinction. Now this distinction of place is not required by any quality of the body, because a body demands a place, not by reason of its quality: wherefore if we remove from a body the fact of its being hot or cold, heavy or light, it still retains the necessity of the aforesaid distinction, as the Philosopher proves (Phys. iv), and as is self-evident. In like manner neither can matter cause the necessity of the aforesaid distinction, because matter does not occupy a place except through its dimensive quantity. Again neither does form occupy a place, unless it have a place through its matter. It remains therefore that the necessity for two bodies occupying each a distinct place results from the nature of dimensive quantity, to which a place is essentially befitting. For this forms part of its definition, since dimensive quantity is quantity occupying a place. Hence it is that if we remove all else in a thing from it, the necessity of this distinction is found in its dimensive quantity alone. Thus take the example of a separate line, supposing there to be two such lines, or two parts of one line, they must needs occupy distinct places, else one line added to another would not make something greater, and this is against common sense. The same applies to surfaces and mathematical bodies. And since matter demands place, through being the subject of dimension, the aforesaid necessity results in placed matter, so that just as it is impossible for there to be two lines, or two parts of a line, unless they occupy distinct places, so is it impossible for there to be two matters, or two parts of matter, without there be distinction of place. And since distinction of matter is the principle of the distinction between individuals, it follows that, as Boethius says (De Trin.), "we cannot possibly conceive two bodies occupying one place," so that this distinction of individuals requires this difference of accidents. Now subtlety does not deprive the glorified body of its dimension; wherefore it nowise removes from it the aforesaid necessity of occupying a distinct place from another body. Therefore the subtlety of a glorified body will not enable it to be in the same place together with another body, but it will be possible for it to be together with another body by the operation of the Divine power: even as the body of Peter had the power whereby the sick were healed at the passing of Peter's shadow (Acts 5:15) not through any inherent property, but by the power of God for the upbuilding of the faith. Thus will the Divine power make it possible for a glorified body to be in the same place together with another body for the perfection of glory.

Reply to Objection 1: That Christ's body was able to be together with another body in the same place was not due to its subtlety, but resulted from the power of His Godhead after His resurrection, even as in His birth [*Cf. TP, Q[28], A[2], ad 3]. Hence Gregory says (Hom. xxvi in Evang.): "The same body went into His disciples the doors being shut, which to human eyes came from the closed womb of the Virgin at His birth." Therefore there is no reason why this should be befitting to glorified bodies on account of their subtlety.

Reply to Objection 2: Light is not a body as we have said above (Sent. ii, Q[13], A[3]; FP, Q[67], A[2]): hence the objection proceeds on a false supposition.

Reply to Objection 3: The glorified body will pass through the heavenly spheres without severing them, not by virtue of its subtlety, but by the Divine power, which will assist them in all things at will.

Reply to Objection 4: From the fact that God will come to the aid of the blessed at will in whatever they desire, it follows that they cannot be surrounded or imprisoned.

Reply to Objection 5: As stated in Phys. iv, 5, "a point is not in a place": hence if it be said to be in a place, this is only accidental, because the body of which it is a term is in a place. And just as the whole place corresponds to the whole body, so the term of the place corresponds to the term of the body. But it happens that two places have one term, even as two lines terminate in one point. And consequently though two bodies must needs be in distinct places, yet the same term of two places corresponds to the two terms of the two bodies. It is in this sense that the bounds of contiguous bodies are said to coincide.

Whether it is possible, by a miracle, for two bodies to be in the same place?

Objection 1: It would seem that not even by a miracle is it possible for two bodies to be in the same place. For it is not possible that, by a miracle, two bodies be at once two and one, since this would imply that contradictions are true at the same time. But if we suppose two bodies to be in the same place, it would follow that those two bodies are one. Therefore this cannot be done by a miracle. The minor is proved thus. Suppose two bodies A and B to be in the same place. The dimensions of A will either be the same as the dimensions of the place, or they will differ from them. If they differ, then some of the dimensions will be separate: which is impossible, since the dimensions that are within the bounds of a place are not in a subject unless they be in a placed body. If they be the same, then for the same reason the dimensions of B will be the same as the dimensions of the place. "Now things that are the same with one and the same thing are the same with one another." Therefore the dimensions of A and B are the same. But two bodies cannot have identical dimensions just as they cannot have the same whiteness. Therefore A and B are one body and yet they were two. Therefore they are at the same time one and two.

Objection 2: Further, a thing cannot be done miraculously either against the common principles---for instance that the part be not less than the whole; since what is contrary to common principles implies a direct contradiction---or contrary to the conclusions of geometry which are infallible deductions from common principles---for instance that the three angles of a triangle should not be equal to two right angles. In like manner nothing can be done to a line that is contrary to the definition of a line, because to sever the definition from the defined is to make two contradictories true at the same time. Now it is contrary to common principles, both to the conclusions of geometry and to the definition of a line, for two bodies to be in the same place. Therefore this cannot be done by a miracle. The minor is proved as follows: It is a conclusion of geometry that two circles touch one another only at a point. Now if two circular bodies were in the same place, the two circles described in them would touch one another as a whole. Again it is contrary to the definition of a line that there be more than one straight line between two points: yet this would be the case were two bodies in the same place, since between two given points in the various surfaces of the place, there would be two straight lines corresponding to the two bodies in that place.

Objection 3: Further, it would seem impossible that by a miracle a body which is enclosed within another should not be in a place, for then it would have a common and not a proper place, and this is impossible. Yet this would follow if two bodies were in the same place. Therefore this cannot be done by a miracle. The minor is proved thus. Supposing two bodies to be in the same place, the one being greater than the other as to every dimension, the lesser body will be enclosed in the greater, and the place occupied by the greater body will be its common place; while it will

have no proper place, because no given surface of the body will contain it, and this is essential to place. Therefore it will not have a proper place.

Objection 4: Further, place corresponds in proportion to the thing placed. Now it can never happen by a miracle that the same body is at the same time in different places, except by some kind of transformation, as in the Sacrament of the Altar. Therefore it can nowise happen by a miracle that two bodies be together in the same place.

On the contrary, The Blessed Virgin gave birth to her Son by a miracle. Now in this hallowed birth it was necessary for two bodies to be together in the same place, because the body of her child when coming forth did not break through the enclosure of her virginal purity. Therefore it is possible for two bodies to be miraculously together in the same place.

Further, this may again be proved from the fact that our Lord went in to His disciples, the doors being shut (Jn. 20:19, 26).

I answer that, As shown above (A[2]) the reason why two bodies must needs be in two places is that distinction in matter requires distinction in place. Wherefore we observe that when two bodies merge into one, each loses its distinct being, and one indistinct being accrues to the two combined, as in the case of mixtures. Hence it is impossible for two bodies to remain two and yet be together unless each retain its distinct being which it had hitherto, in so much as each of them was a being undivided in itself and distinct from others. Now this distinct being depends on the essential principles of a thing as on its proximate causes, but on God as on the first cause. And since the first cause can preserve a thing in being, though the second causes be done away, as appears from the first proposition of De Causis, therefore by God's power and by that alone it is possible for an accident to be without substance as in the Sacrament of the Altar. Likewise by the power of God, and by that alone, it is possible for a body to retain its distinct being from that of another body, although its matter be not distinct as to place from the matter of the other body: and thus it is possible by a miracle for two bodies to be together in the same place.

Reply to Objection 1: This argument is sophistical because it is based on a false supposition, or begs the question. For it supposes the existence, between two opposite superficies of a place, of a dimension proper to the place, with which dimension a dimension of the body put in occupation of the place would have to be identified: because it would then follow that the dimensions of two bodies occupying a place would become one dimension, if each of them were identified with the dimension of the place. But this supposition is false, because if it were true whenever a body acquires a new place, it would follow that a change takes place in the dimensions of the place or of thing placed: since it is impossible for two things to become one anew, except one of them be changed. Whereas if, as is the case in truth, no other dimensions belong to a place than those of the thing occupying the place, it is clear that the argument proves nothing, but begs the question, because according to this nothing else has been said, but that the dimensions of a thing placed are the same as the dimensions of the place; excepting that the dimensions of the thing placed are contained within the bounds of the place, and that the distance between the bounds of a place is commensurate with the distance between the bounds of the thing placed, just as the former would be distant by their own dimensions if they had them. Thus that the dimensions of two bodies be the dimensions of one place is nothing else than that two bodies be in the same place, which is the chief question at issue.

Reply to Objection 2: Granted that by a miracle two bodies be together in the same place, nothing follows either against common principles, or against the definition of a line, or against any

conclusions of geometry. For, as stated above (A[2]), dimensive quantity differs from all other accidents in that it has a special reason of individuality and distinction, namely on account of the placing of the parts, besides the reason of individuality and distinction which is common to it and all other accidents, arising namely from the matter which is its subject. Thus then one line may be understood as being distinct from another, either because it is in another subject (in which case we are considering a material line), or because it is placed at a distance from another (in which case we are considering a mathematical line, which is understood apart from matter). Accordingly if we remove matter, there can be no distinction between lines save in respect of a different placing: and in like manner neither can there be a distinction of points, nor of superficies, nor of any dimensions whatever. Consequently geometry cannot suppose one line to be added to another, as being distinct therefrom unless it be distinct as to place. But supposing by a Divine miracle a distinction of subject without a distinction of place, we can understand a distinction of lines; and these are not distant from one another in place, on account of the distinction of subjects. Again we can understand a difference of points, and thus different lines described on two bodies that are in the same place are drawn from different points to different points; for the point that we take is not a point fixed in the place, but in the placed body, because a line is not said to be drawn otherwise than from a point which is its term. In like manner the two circles described in two spherical bodies that occupy the same place are two, not on account of the difference of place, else they could not touch one another as a whole, but on account of the distinction of subjects, and thus while wholly touching one another they still remain two. Even so a circle described by a placed spherical body touches, as a whole, the other circle described by the locating body.

Reply to Objection 3: God could make a body not to be in a place; and yet supposing this, it would not follow that a certain body is not in a place, because the greater body is the place of the lesser body, by reason of its superficies which is described by contact with the terms of the lesser body.

Reply to Objection 4: It is impossible for one body to be miraculously in two places locally (for Christ's body is not locally on the altar), although it is possible by a miracle for two bodies to be in the same place. Because to be in several places at once is incompatible with the individual, by reason of its having being undivided in itself, for it would follow that it is divided as to place. on the other hand, to be in the same place with another body is incompatible with the individual as distinct from aught else. Now the nature of unity is perfected in indivision (Metaph. v), whereas distinction from others is a result of the nature of unity. Wherefore that one same body be locally in several places at once implies a contradiction, even as for a man to lack reason, while for two bodies to be in the same place does not imply a contradiction, as explained above. Hence the comparison fails.

Whether one glorified body can be in the same place together with another glorified body?

Objection 1: It would seem that a glorified body can be in the same place together with another glorified body. Because where there is greater subtlety there is less resistance. If then a glorified body is more subtle than a non-glorified body, it will offer less resistance to a glorified body: and so if a glorified body can be in the same place with a non-glorified body, much more can it with a glorified body.

Objection 2: Further, even as a glorified body will be more subtle than a non-glorified body, so will one glorified body be more subtle than another. Therefore if a glorified body can be in the same place with a non-glorified body, a more subtle glorified body can be in the same place with a less subtle glorified body.

Objection 3: Further, the body of heaven is subtle, and will then be glorified. Now the glorified body of a saint will be able to be in the same place with the body of heaven, since the saints will be able at will to travel to and from earth. Therefore two glorified bodies will be able to occupy the same place.

On the contrary, The glorified bodies will be spiritual, that is like spirits in a certain respect. Now two spirits cannot be in the same place, although a body and a spirit can be in the same place, as stated above (Sent. i, D, 37, Q[3], A[3]; FP, Q[52], A[3]). Therefore neither will two glorified bodies be able to be in the same place.

Further, if two bodies occupy the same place, one is penetrated by the other. But to be penetrated is a mark of imperfection which will be altogether absent from the glorified bodies. Therefore it will be impossible for two glorified bodies to be in the same place.

I answer that, The property of a glorified body does not make it able to be in the same place with another glorified body, nor again to be in the same place with a non-glorified body. But it would be possible by the Divine power for two glorified bodies or two non-glorified bodies to be in the same place, even as a glorified body with a non-glorified body. Nevertheless it is not befitting for a glorified body to be in the same place with another glorified body, both because a becoming order will be observed in them, which demands distinction, and because one glorified body will not be in the way of another. Consequently two glorified bodies will never be in the same place.

Reply to Objection 1: This argument supposes that a glorified body is able by reason of its subtlety to be in the same place with another body: and this is not true.

The same answer applies to the Second Objection.

Reply to Objection 3: The body of heaven and the other bodies will be said equivocally to be glorified, in so far as they will have a certain share in glory, and not as though it were becoming for them to have the gifts of glorified human bodies.

Whether by virtue of its subtlety a glorified body will no longer need to be in an equal place?

Objection 1: It would seem that by virtue of its subtlety, a glorified body will no longer need to be in an equal place. For the glorified bodies will be made like to the body of Christ according to Phil. 3:21. Now Christ's body is not bound by this necessity of being in an equal place: wherefore it is contained whole under the small or great dimensions of a consecrated host. Therefore the same will be true of the glorified bodies.

Objection 2: Further, the Philosopher proves (Phys. iv, 6), that two bodies are not in the same place, because it would follow that the greatest body would occupy the smallest place, since its various parts could be in the same part of the place: for it makes no difference whether two bodies or however many be in the same place. Now a glorified body will be in the same place with another body, as is commonly admitted. Therefore it will be possible for it to be in any place however small.

Objection 3: Further, even as a body is seen by reason of its color, so is it measured by reason of its quantity. Now the glorified body will be so subject to the spirit that it will be able at will to

be seen, and not seen, especially by a non-glorified eye, as evidenced in the case of Christ. Therefore its quantity will be so subject to the spirit's will that it will be able to be in a little or great place, and to have a little or great quantity at will.

On the contrary, The Philosopher says (Phys. iv, text. 30) that "whatever is in a place occupies a place equal to itself." Now the glorified body will be in a place. Therefore it will occupy a place equal to itself.

Further, the dimensions of a place and of that which is in that place are the same, as shown in Phys. iv, text. 30,76,77. Therefore if the place were larger than that which is in the place the same thing would be greater and smaller than itself, which is absurd.

I answer that, A body is not related to place save through the medium of its proper dimensions, in respect of which a located body is confined through contact with the locating body. Hence it is not possible for a body to occupy a place smaller than its quantity, unless its proper quantity be made in some way less than itself: and this can only be understood in two ways. First, by a variation in quantity in respect of the same matter, so that in fact the matter which at first is subject to a greater quantity is afterwards subject to a lesser. Some have held this to be the case with the glorified bodies, saying that quantity is subject to them at will, so that when they list, they are able to have a great quantity, and when they list a small quantity. But this is impossible, because no movement affecting that which is intrinsic to a thing is possible without passion to the detriment [*Cf. FS, Q[22], A[1]; FS, Q[41], A[1]] of its substance. Hence in incorruptible, i.e. heavenly, bodies, there is only local movement, which is not according to something intrinsic. Thus it is clear that change of quantity in respect of matter would be incompatible with the impassibility and incorruptibility of a glorified body. Moreover, it would follow that a glorified body would be sometimes rarer and sometimes denser, because since it cannot be deprived of any of its matter, sometimes the same matter would be under great dimensions and sometimes under small dimensions, and thus it would be rarefied and densified, which is impossible. Secondly, that the quantity of a glorified body become smaller than itself may be understood by a variation of place; so, to wit, that the parts of a glorified body insinuate themselves into one another, so that it is reduced in quantity however small it may become. And some have held this to be the case, saying that by reason of its subtlety a glorified body will be able to be in the same place with a non-glorified body: and that in like manner its parts can be one within the other, so much so that a whole glorified body will be able to pass through the minutest opening in another body: and thus they explain how Christ's body came out of the Virgin's womb; and how it went into His disciples, the doors being shut. But this is impossible; both because the glorified body will not be able, by reason of its subtlety, to be in the same place with another body, and because, even if it were able to be in the same place with another body, this would not be possible if the other were a glorified body, as many say; and again because this would be inconsistent with the right disposition of the human body, which requires the parts to be in a certain fixed place and at a certain fixed distance from one another. Wherefore this will never happen, not even by a miracle. Consequently we must say that the glorified body will always be in a place equal to itself.

Reply to Objection 1: Christ's body is not locally in the Sacrament of the Altar, as stated above (Sent. iv, D, 10, Q[1], A[1], ad 5; TP, Q[77], A[5]).

Reply to Objection 2: The Philosopher's argument is that for the same reason one part might permeate another. But this permeation of the parts of a glorified body into one another is impossible, as stated above. Therefore the objection does not prove.

Reply to Objection 3: A body is seen because it acts on the sight: but that it does or does not act on the sight causes no change in the body. Hence it is not unfitting, if it can be seen when it will, and not seen when it will [*Cf. TP, Q[55], A[4]]. On the other hand, being in a place is not an action proceeding from a body by reason of its quantity, as being seen is by reason of its color. Consequently the comparison fails.

Whether the glorified body, by reason of its subtlety, will be impalpable?

Objection 1: It would seem that the glorified body, by reason of its subtlety, is impalpable. For Gregory says (Hom. xxv in Evang.): "What is palpable must needs be corruptible." But the glorified body is incorruptible. Therefore it is impalpable.

Objection 2: Further, whatever is palpable resists one who handles it. But that which can be in the same place with another does not resist it. Since then a glorified body can be in the same place with another body, it will not be palpable.

Objection 3: Further, every palpable body is tangible. Now every tangible body has tangible qualities in excess of the qualities of the one touching it. Since then in the glorified bodies the tangible qualities are not in excess but are reduced to a supreme degree of equality, it would seem that they are impalpable.

On the contrary, our Lord rose again with a glorified body; and yet His body was palpable, as appears from Lk. 24:39: "Handle, and see; for a spirit hath not flesh and bones." Therefore the glorified bodies also will be palpable.

Further, this is the heresy of Eutychius, Bishop of Constantinople, as Gregory states (Moral. xxiv): for he said that in the glory of the resurrection our bodies will be impalpable.

I answer that, Every palpable body is tangible, but not conversely. For every body is tangible that has qualities whereby the sense of touch has a natural aptitude to be affected: wherefore air, fire, and the like are tangible bodies: but a palpable body, in addition to this, resists the touch; wherefore the air which never resists that which passes through it, and is most easily pierced, is tangible indeed but not palpable. Accordingly it is clear that a body is said to be palpable for two reasons, namely on account of its tangible qualities, and on account of its resisting that which touches it, so as to hinder it from piercing it. And since the tangible qualities are hot and cold and so forth, which are not found save in heavy and light bodies, which through being contrary to one another are therefore corruptible, it follows that the heavenly bodies, which by their nature are incorruptible, are sensible to the sight but not tangible, and therefore neither are they palpable. This is what Gregory means when he says (Hom. xxv in Evang.) that "whatever is palpable must needs be corruptible." Accordingly the glorified body has by its nature those qualities which have a natural aptitude to affect the touch, and yet since the body is altogether subject to the spirit, it is in its power thereby to affect or not to affect the touch. In like manner it is competent by its nature to resist any other passing body, so that the latter cannot be in the same place together with it: although, according to its pleasure, it may happen by the Divine power that it occupy the same place with another body, and thus offer no resistance to a passing body. Wherefore according to its nature the glorified body is palpable, but it is competent for it to be impalpable to a non-glorified body by a supernatural power. Hence Gregory says (Hom. xxv in Evang.) that "our Lord offered His flesh to be handled,

which He had brought in through the closed doors, so as to afford a complete proof that after His resurrection His body was unchanged in nature though changed in glory."

Reply to Objection 1: The incorruptibility of a glorified body does not result from the nature of its component parts; and it is on account of that nature that whatever is palpable is corruptible, as stated above. Hence the argument does not prove.

Reply to Objection 2: Although in a way it is possible for a glorified body to be in the same place with another body: nevertheless the glorified body has it in its power to resist at will any one touching it, and thus it is palpable.

Reply to Objection 3: In the glorified bodies the tangible qualities are not reduced to the real mean that is measured according to equal distance from the extremes, but to the proportionate mean, according as is most becoming to the human complexion in each part. Wherefore the touch of those bodies will be most delightful, because a power always delights in a becoming object, and is grieved by excess.

OF THE AGILITY OF THE BODIES OF THE BLESSED (THREE ARTICLES)

We must now consider the agility of the bodies of the blessed in the resurrection. Under this head there are three points of inquiry:

(1) Whether the glorified bodies will be agile?

(2) Whether they will move?

(3) Whether they will move instantaneously?

Whether the glorified bodies will be agile?

Objection 1: It would seem that the glorified bodies will not be agile. For that which is agile by itself needs not to be carried in order to move. But the glorified bodies will, after the resurrection, be taken up by the angels (according to a gloss) in the clouds "to meet Christ, into the air" (1 Thess. 4:16). Therefore the glorified bodies will not be agile.

Objection 2: Further, no body that moves with labor and pain can be said to be agile. Yet the glorified bodies will move thus, since the principle of their movement, namely the soul, moves them counter to their nature, else they would always move in the same direction. Therefore they are not agile.

Objection 3: Further, of all the animal operations sense surpasses movement in nobility and priority. Yet no property is ascribed to glorified bodies as perfecting them in sensation. Therefore neither should agility be ascribed to them as perfecting them in movement.

Objection 4: Further, nature gives different animals instruments of different disposition according to their different powers: hence she does not give instruments of the same disposition to slow as to fleet animals. Now God's works are much more orderly than those of nature. Since then the glorified body's members will have the same disposition, shape and quantity as they now have, it would seem that it will have no agility other than it has now.

On the contrary, It is written (1 Cor. 15:43): "It is sown in weakness, it shall rise in power," that is, according to a gloss, "mobile and living." But mobility can only signify agility in movement. Therefore the glorified bodies will be agile.

Further, slowness of movement would seem especially inconsistent with the nature of a spirit. But the glorified bodies will be most spiritual according to 1 Cor. 15:44. Therefore they will be agile.

I answer that, The glorified body will be altogether subject to the glorified soul, so that not only will there be nothing in it to resist the will of the spirit, for it was even so in the case of Adam's body, but also from the glorified soul there will flow into the body a certain perfection, whereby it will become adapted to that subjection: and this perfection is called "the gift of the glorified body." Now the soul is united to body not only as its form, but also as its mover; and in both ways the glorified body must needs be most perfectly subject to the glorified soul. Wherefore even as by the gift of subtlety the body is wholly subject to the soul as its form, whence it derives its specific being, so by the gift of agility it is subject to the soul as its mover, so that it is prompt and apt to obey the spirit in all the movements and actions of the soul.

Some, however, ascribe the cause of this agility to the fifth, i.e. the heavenly essence, which will then be predominant in the glorified bodies. But of this we have frequently observed that it does not seem probable (Q[82], A[1]; Q[83], A[1]). Wherefore it is better to ascribe it to the soul, whence glory flows to the body.

Reply to Objection 1: Glorified bodies are said to be borne by the angels and also on the clouds, not as though they needed them, but in order to signify the reverence which both angels and all creatures will show them.

Reply to Objection 2: The more the power of the moving soul dominates over the body, the less is the labor of movement, even though it be counter to the body's nature. Hence those in whom the motive power is stronger, and those who through exercise have the body more adapted to obey the moving spirit, labor less in being moved. And since, after the resurrection, the soul will perfectly dominate the body, both on account of the perfection of its own power, and on account of the glorified body's aptitude resulting from the outflow of glory which it receives from the soul, there will be no labor in the saints' movements, and thus it may be said that the bodies of the saints' will be agile.

Reply to Objection 3: By the gift of agility the glorified body will be rendered apt not only for local movement but also for sensation, and for the execution of all the other operations of the soul.

Reply to Objection 4: Even as nature gives to fleeter animals instruments of a different disposition in shape and quantity, so God will give to the bodies of the saints a disposition other than that which they have now, not indeed in shape and quantity, but in that property of glory which is called agility.

Whether the saints will never use their agility for the purpose of movement?

Objection 1: It would seem that the saints will never use their agility for the purpose of movement. For, according to the Philosopher (Phys. iii, 2), "movement is the act of the imperfect." But there will be no imperfection in glorified bodies. Neither therefore will there be any movement.

Objection 2: Further, all movement is on account of some need, because whatever is in motion is moved for the sake of obtaining some end. But glorified bodies will have no need, since as

Augustine says (De Spiritu et Anima, lxiii [*Cf. Q[70], A[2], ad 1]), "all thou willest will be there, and nothing that thou willest not." Therefore they will not move.

Objection 3: Further, according to the Philosopher (De Coelo et Mundo ii), "that which shares the Divine goodness without movement shares it more excellently than that which shares it with movement." Now the glorified body shares the Divine goodness more excellently than any other body. Since then certain bodies, like the heavenly bodies, will remain altogether without movement, it seems that much more will human bodies remain so.

Objection 4: Further, Augustine says (De Vera Relig. xii) that the soul being established in God will in consequence establish its body. Now the soul will be so established in God, that in no way will it move away from Him. Therefore in the body there will be no movement caused by the soul.

Objection 5: Further, the more noble a body is, the more noble a place is due to it: wherefore Christ's body which is the most exalted of all has the highest place of all, according to Heb. 7:26, "Made higher than the heavens," where a gloss [*Gloss on Heb. 1:3: "On the right hand of the majesty"] says, "in place and dignity." And again each glorified body will, in like manner, have a place befitting it according to the measure of its dignity. Now a fitting place is one of the conditions pertaining to glory. Since then after the resurrection the glory of the saints will never vary, neither by increase nor by decrease, because they will then have reached the final term of all, it would seem that their bodies will never leave the place assigned to them, and consequently will not be moved.

On the contrary, It is written (Is. 40:31): "They shall run and not be weary, they shall walk and not faint"; and (Wis. 3:7): "(The just) shall run to and fro like sparks among the reeds." Therefore there will be some movement in glorified bodies.

I answer that, It is necessary to suppose that the glorified bodies are moved sometimes, since even Christ's body was moved in His ascension, and likewise the bodies of the saints, which will arise from the earth, will ascend to the empyrean [*The empyrean was the highest of the concentric spheres or heavens, and was identified by Christian writers with the abode of God. Cf. FP, Q[56], A[3]]. But even after they have climbed the heavens, it is likely that they will sometimes move according as it pleases them; so that by actually putting into practice that which is in their power, they may show forth the excellence of Divine wisdom, and that furthermore their vision may be refreshed by the beauty of the variety of creatures, in which God's wisdom will shine forth with great evidence: for sense can only perceive that which is present, although glorified bodies can perceive from a greater distance than non-glorified bodies. And yet movement will nowise diminish their happiness which consists in seeing God, for He will be everywhere present to them; thus Gregory says of the angels (Hom. xxxiv in Evang.) that "wherever they are sent their course lies in God."

Reply to Objection 1: Local movement changes nothing that is intrinsic to a thing, but only that which is without namely place. Hence that which is moved locally is perfect as to those things which are within (Phys. viii, 7), although it has an imperfection as to place, because while it is in one place it is in potentiality with regard to another place, since it cannot be in several places at the same time, for this belongs to God alone. But this defect is not inconsistent with the perfection of glory, as neither is the defect whereby a creature is formed from nothing. Hence such like defects will remain in glorified bodies.

Reply to Objection 2: A person is said to need a thing in two ways, namely absolutely and relatively. One needs absolutely that without which one cannot retain one's being or one's perfection: and thus movement in glorified bodies will not be on account of a need, because their happiness will suffice them for all such things. But we need a thing relatively when without it some end we have in view cannot be obtained by us, or not so well, or not in some particular way. It is thus that movement will be in the blessed on account of need, for they will be unable to show forth their motive power practically, unless they be in motion, since nothing prevents a need of this kind being in glorified bodies.

Reply to Objection 3: This argument would prove if the glorified body were unable even without movement to share the Divine goodness much more perfectly than the heavenly bodies, which is untrue. Hence glorified bodies will be moved, not in order to gain a perfect participation in the Divine goodness (since they have this through glory), but in order to show the soul's power. On the other hand, the movement of the heavenly bodies could not show their power, except the power they have in moving lower bodies to generation and corruption, which is not becoming to that state. Hence the argument does not prove.

Reply to Objection 4: Local movement takes nothing away from the stability of the soul that is established in God, since it does not affect that which is intrinsic to a thing, as stated above (ad 1).

Reply to Objection 5: The fitting place assigned to each glorified body according to the degree of its dignity belongs to the accidental reward. Nor does it follow that this reward is diminished whenever the body is outside its place; because that place pertains to reward, not as actually containing the body located therein (since nothing flows therefrom into the glorified body, but rather does it receive splendor therefrom), but as being due to merits. Wherefore, though out of that place, they will still continue to rejoice in it.

Whether the movement of the saints will be instantaneous?

Objection 1: It would seem that movement of the saints will be instantaneous. For Augustine says (De Civ. Dei xxii, 30) that "wherever the spirit listeth there will the body be." Now the movement of the will, whereby the spirit wishes to be anywhere, is instantaneous. Therefore the body's movement will be instantaneous.

Objection 2: Further, the Philosopher (Phys. iv, 8) proves that there is no movement through a vacuum, because it would follow that something moves instantaneously, since a vacuum offers no resistance whatever to a thing that is in motion, whereas the plenum offers resistance; and so there would be no proportion between the velocity of movement in a vacuum and that of movement in a plenum, since the ratio of movements in point of velocity is as the ratio of the resistance offered by the medium. Now the velocities of any two movements that take place in time must needs be proportional, since any one space of time is proportional to any other. But in like manner no full place can resist a glorified body since this can be in the same place with another body, no matter how this may occur; even as neither can a vacuum resist a body. Therefore if it moves at all, it moves instantaneously.

Objection 3: Further, the power of a glorified soul surpasses the power of a non-glorified soul, out of all proportion so to speak. Now the non-glorified soul moves the body in time. Therefore the glorified soul moves the body instantaneously.

Objection 4: Further, whatever is moved equally soon to what is near and what is distant, is moved instantaneously. Now such is the movement of a glorified body, for however distant the space to which it is moved, the time it takes to be moved is imperceptible: wherefore Augustine says (QQ. De Resurrectione, Ep. cii, qu. 1) that "the glorified body reaches equally soon to any distance, like the sun's ray." Therefore the glorified body is moved instantaneously.

Objection 5: Further, whatever is in motion is moved either in time or in an instant. Now after the resurrection the glorified body will not be moved in time, since time will not be then according to Apoc. 10:6. Therefore this movement will be instantaneous.

On the contrary, In local movement space. movement and time are equally divisible, as is demonstrated in Phys. vi, 4. Now the space traversed by a glorified body in motion is divisible. Therefore both the movement and the time are divisible. But an instant is indivisible. Therefore this movement will not be instantaneous.

Further, a thing cannot be at the same time wholly in one place and partly in another place, since it would follow that the remaining part is in two places at the same time, which is impossible. But whatever is in motion is partly in a term "wherefrom" and partly in a term "whereto," as is proved in Phys. vi, 6: while whatever has been in motion is wholly in the term whereto the movement is directed; and it is impossible at the same time for it to be moved and to have been moved. Now that which is moved instantaneously is being moved and has been moved at the same time. Therefore the local movement of a glorified body cannot be instantaneous.

I answer that, Opinion is much divided on this point. For some say that a glorified body passes from one place to another without passing through the interval, just as the will passes from one place to another without passing through the interval, and that consequently it is possible for the movement of a glorified body like that of the will to be instantaneous. But this will not hold: because the glorified body will never attain to the dignity of the spiritual nature, just as it will never cease to be a body. Moreover, when the will is said to move from one place to another, it is not essentially transferred from place to place, because in neither place is it contained essentially, but it is directed to one place after being directed by the intention to another: and in this sense it is said to move from one place to another.

Hence others [*Alexander of Hales, Sum. Th. III, Q[23], mem. 3] say that it is a property of the nature of a glorified body, since it is a body, to pass through the interval and consequently to be moved in time, but that by the power of glory, which raises it to a certain infinitude above the power of nature, it is possible for it not to pass through the interval, and consequently to be moved instantaneously. But this is impossible since it implies a contradiction: which is proved as follows. Suppose a body which we will call Z to be in motion from A to B. It is clear that Z, as long as it is wholly in A is not in motion; and in like manner when it is wholly in B, because then the movement is past. Therefore if it is at any time in motion it must needs be neither wholly in A nor wholly in B. Therefore while it is in motion, it is either nowhere, or partly in A, and partly in B, or wholly in some other intervening place, say C, or partly in A and C and partly in C and B. But it is impossible for it to be nowhere, for then there would be a dimensive quantity without a place, which is impossible. Nor again is it possible for it to be partly in A and partly in B without being in some way in the intervening space. for since B is a place distant from A, it would follow that in the
