intervening space the part of Z which is in B is not continuous with the part which is in A. Therefore it follows that it is either wholly in C, or partly in C, and partly in some other place that intervenes between C and A, say D, and so forth. Therefore it follows that Z does not pass form A to B unless first of all it be in all the intervening places: unless we suppose that it passes from A to B without ever being moved, which implies a contradiction, because the very succession of places is local movement. The same applies to any change whatever having two opposite terms, each of which is a positive entity, but not to those changes which have only one positive term, the other being a pure privation, since between affirmation and negation or privation there is no fixed distance: wherefore that which is in the negation may be nearer to or more remote from affirmation, and conversely, by reason of something that causes either of them or disposes thereto: so that while that which is moved is wholly under a negation it is changed into affirmation, and "vice versa"; wherefore in such things "to be changing precedes to be changed," as is proved in Phys. vi, 5. Nor is there any comparison with the movement of an angel, because being in a place is predicated equivocally of a body and an angel. Hence it is clear that it is altogether impossible for a body to pass from one place to another, unless it pass through every interval.

Wherefore others grant this, and yet they maintain that the glorified body is moved instantaneously. But it follows from this that a glorified body is at the same instant in two or more places together, namely in the ultimate term, and in all the intervening places, which is impossible.

To this, however, they reply that, although it is the same instant really, it is not the same logically, like a point at which different lines terminate. But this is not enough, because an instant measures the instantaneous, according to its reality and not according to our way of considering it. Wherefore an instant through being considered in a different way is not rendered capable of measuring things that are not simultaneous in time, just as a point through being considered in a different way does not make it possible for one point of place to contain things that are locally distant from one another.

Hence others with greater probability hold that a glorified body moves in time, but that this time is so short as to be imperceptible; and that nevertheless one glorified body can pass through the same space in less time than another, because there is no limit to the divisibility of time, no matter how short a space we may take.

Reply to Objection 1: That which is little lacking is as it were not lacking at all (Phys. ii, 5); wherefore we say: "I do so and so at once," when it is to be done after a short time. It is in this sense that Augustine speaks when he says that "wheresoever the will shall be, there shall the body be forthwith." Or we may say that in the blessed there will never be an inordinate will: so that they never will wish their body to be instantaneously where it cannot be, and consequently whatever instant the will shall choose, at that same instant the body will be in whatever place the will shall determine.

Reply to Objection 2: Some have demurred to this proposition of the Philosopher's, as the Commentator thereon observes. They say that the ratio of one whole movement to another whole movement is not necessarily as the ratio of one resisting medium to another resisting medium, but that the ratio of the intervening mediums gives us the ratio of retardations attending the movements on account of the resistance of the medium. For every movement has a certain fixed speed, either fast or slow, through the mover overcoming the movable, although there be no resistance on the part of the medium; as evidenced in heavenly bodies, which have nothing to hinder their movement; and yet they do not move instantaneously, but in a fixed time proportionate to the power of the mover in comparison with the movable. Consequently it is clear that even if we suppose something

to move in a vacuum, it does not follow that it moves instantaneously, but that nothing is added to the time which that movement requires in the aforesaid proportion of the mover to the movable, because the movement is not retarded.

But this reply, as the Commentator observes, proceeds from an error in the imagination; for it is imagined that the retardation resulting from the resistance of the medium is a part of movement added to the natural movement, the quantity of which is in proportion to the mover in comparison with the movable, as when one line is added to another: for the proportion of one total to the other is not the same as the proportion of the lines to which an addition has been made. [*The same applies to mathematical quantities: for instance the ratio 2 + 1 to 4 + 1 is not as 2 to 4.] And so there would not be the same proportion between one whole sensible movement and another, as between the retardations resulting from the resistance of the medium. This is an error of the imagination, because each part of a movement has as much speed as the whole movement: whereas not every part of a line has as much of the dimensive quantity as the whole line has. Hence any retardation or acceleration affecting the movement affects each of its parts, which is not the case with lines: and consequently the retardation that comes to a movement is not another part of the movement, whereas in the case of the lines that which is added is a part of the total line.

Consequently, in order to understand the Philosopher's argument, as the Commentator explains, we must take the whole as being one, that is we must take not only the resistance of the movable to the moving power, but also the resistance of the medium through which the movement takes place, and again the resistance of anything else, so that we take the amount of retardation in the whole movement as being proportionate to the moving power in comparison with the resisting movable, no matter in what way it resist, whether by itself or by reason of something extrinsic. For the movable must needs always resist the mover somewhat, since mover and moved, agent and patient, as such, are opposed to one another. Now sometimes it is to be observed that the moved resists the mover by itself, either because it has a force inclining it to a contrary movement, as appears in violent movements, or at least because it has a place contrary to the place which is in the intention of the mover; and such like resistance even heavenly bodies offer their movers. Sometimes the movable resists the power of the mover, by reason only of something else and not by itself. This is seen in the natural movement of heavy and light things, because by their very form they are inclined to such a movement: for the form is an impression of their generator, which is the mover as regards heavy and light bodies. On the part of matter we find no resistance, neither of a force inclining to a contrary movement nor of a contrary place, since place is not due to matter except in so far as the latter, being circumscribed by its dimensions, is perfected by its natural form. Hence there can be no resistance save on the part of the medium, and this resistance is connatural to their movement. Sometimes again the resistance results from both, as may be seen in the movements of animals.

Accordingly when in a movement there is no resistance save on the part of the movable, as in the heavenly bodies, the time of the movement is measured according to the proportion of the mover to the movable, and the Philosopher's argument does not apply to these, since if there be no medium at all their movement is still a movement in time. on the other hand, in those movements where there is resistance on the part of the medium only, the measure of time is taken only according to the obstacle on the part of the medium, so that if the medium be removed there will be no longer an obstacle; and so either it will move instantaneously, or it will move in an equal time through a vacuum and through a plenum, because granted that it moves in time through a vacuum, that time

will bear some proportion to the time in which it moves through a plenum. Now it is possible to imagine another body more subtle in the same proportion than the body which filled the space, and then if this body fill some other equal space it will move in as little time through that plenum as it did previously through a vacuum, since by as much as the subtlety of the medium is increased by so much is the length of time decreased, and the more subtle the medium the less it resists. But in those other movements where resistance is offered by both the movable and the medium, the quantity of time must be proportionate to the power of the mover as compared with the resistance of both movable and medium together. Hence granted that the medium be taken away altogether, or that it cease to hinder, it does not follow that the movement is instantaneous, but that the time is measured according only to the resistance of the movable. Nor will there be any inconsistency if it move in an equal time through a vacuum, and through a space filled with the most subtle body imaginable, since the greater the subtlety we ascribe to the medium the less is it naturally inclined to retard the movement. Wherefore it is possible to imagine so great a subtlety, as will naturally retard the movement less than does the resistance of the movable, so that the resistance of the medium will add no retardation to the movement.

It is therefore evident that although the medium offer no resistance to the glorified bodies, in so far as it is possible for them to be in the same place with another body, nevertheless their movement will not be instantaneous, because the movable body itself will resist the motive power from the very fact that it has a determinate place, as we have said in reference to the heavenly bodies.

Reply to Objection 3: Although the power of a glorified soul surpasses immeasurably the power of a non-glorified soul, it does not surpass it infinitely, because both powers are finite: hence it does not follow that it causes instantaneous movement. And even if its power were simply infinite, it would not follow that it causes an instantaneous movement, unless the resistance of the movable were overcome altogether. Now although the resistance of the movable to the mover, that results from opposition to such a movement by reason of its being inclined to a contrary movement, can be altogether overcome by a mover of infinite power, nevertheless the resistance it offers through contrariety towards the place which the mover intends by the movement cannot be overcome altogether except by depriving it of its being in such and such a place or position. For just as white resists black by reason of whiteness, and all the more according as whiteness is the more distant from blackness, so a body resists a certain place through having an opposite place and its resistance is all the greater, according as the distance is greater. Now it is impossible to take away from a body its being in some place or position, except one deprive it of its corporeity, by reason of which it requires a place or position: wherefore so long as it retains the nature of a body, it can nowise be moved instantaneously, however greater be the motive power. Now the glorified body will never lose its corporeity, and therefore it will never be possible for it to be moved instantaneously.

Reply to Objection 4: In the words of Augustine, the speed is said to be equal because the excess of one over the other is imperceptible, just as the time taken by the whole movement is imperceptible.

Reply to Objection 5: Although after the resurrection the time which is the measure of the heaven's movement will be no more, there will nevertheless be time resulting from the before and after in any kind of movement.

OF THE CLARITY OF THE BEATIFIED BODIES (THREE ARTICLES)

We must now consider the clarity of the beatified bodies at the resurrection. Under this head there are three points of inquiry:

(1) Whether there will be clarity in the glorified bodies?

(2) Whether this clarity will be visible to the non-glorified eye?

(3) Whether a glorified body will of necessity be seen by a non-glorified body?

Whether clarity is becoming to the glorified body?

Objection 1: It would seem that clarity is unbecoming to the glorified body. Because according to Avicenna (Natural. vi, 2), "every luminous body consists of transparent parts." But the parts of a glorified body will not be transparent, since in some of them, such as flesh and bones, earth is predominant. Therefore glorified bodies are not lightsome.

Objection 2: Further, every lightsome body hides one that is behind it; wherefore one luminary behind another is eclipsed, and a flame of fire prevents one seeing what is behind it. But the glorified bodies will not hide that which is within them, for as Gregory says on Job 28:17, "Gold or crystal cannot equal it" (Moral. xviii, 48). "There," that is in the heavenly country, "the grossness of the members will not hide one's mind from another's eyes, and the very harmony of the body will be evident to the bodily sight." Therefore those bodies will not be lightsome.

Objection 3: Further, light and color require a contrary disposition in their subject, since "light is the extreme point of visibility in an indeterminate body; color, in a determinate body" (De Sensu et Sensato iii). But glorified bodies will have color, for as Augustine says (De Civ. Dei xxii, 3), "the body's beauty is harmony of parts with a certain charm of color": and it will be impossible for the glorified bodies to lack beauty. Therefore the glorified bodies will not be lightsome.

Objection 4: Further, if there be clarity in the glorified bodies, it will need to be equal in all the parts of the body, just as all the parts will be equally impassible, subtle and agile. But this is not becoming, since one part has a greater disposition to clarity than another, for instance the eye than the hand, the spirits [*"Animalem," as though it were derived from "animus"---the mind. Cf. FS, Q[50], A[1],3m; FS, Q[52], A[1] ,3m] than the bones, the humors than the flesh or nerves. Therefore it would seem unfitting for those bodies to be lightsome.

On the contrary, It is written (Mat. 13:43): "The just shall shine as the sun in the kingdom of their Father," and (Wis. 3:7): "The just shall shine, and shall run to and fro like sparks among the reeds."

Further, it is written (1 Cor. 15:43): "It is sown in dishonor, it shall rise in glory," which refers to clarity, as evidenced by the previous context where the glory of the rising bodies is compared to the clarity of the stars. Therefore the bodies of the saints will be lightsome.

I answer that, It is necessary to assert that after the resurrection the bodies of the saints will be lightsome, on account of the authority of Scripture which makes this promise. But the cause of this clarity is ascribed by some to the fifth or heavenly essence, which will then predominate in the human body. Since, however, this is absurd, as we have often remarked (Q[84], A[1]), it is better to say that this clarity will result from the overflow of the soul's glory into the body. For whatever is received into anything is received not according to the mode of the source whence it flows, but according to the mode of the recipient. Wherefore clarity which in the soul is spiritual is received into the body as corporeal. And consequently according to the greater clarity of the soul by reason

of its greater merit, so too will the body differ in clarity, as the Apostle affirms (1 Cor. 15:41). Thus in the glorified body the glory of the soul will be known, even as through a crystal is known the color of a body contained in a crystal vessel, as Gregory says on Job 28:17, "Gold or crystal cannot equal it."

Reply to Objection 1: Avicenna is speaking of a body that has clarity through the nature of its component parts. It is not thus but rather by merit of virtue that the glorified body will have clarity.

Reply to Objection 2: Gregory compares the glorified body to gold on account of clarity, and to crystal on account of its transparency. Wherefore seemingly we should say that they will be both transparent and lightsome; for that a lightsome body be not transparent is owing to the fact that the clarity of that body results from the density of the lightsome parts, and density is opposed to transparency. Then, however, clarity will result from another cause, as stated above: and the density of the glorified body will not deprive it of transparency, as neither does the density of a crystal deprive crystal.

Some, on the other hand, say that they are compared to crystal, not because they are transparent, but on account of this likeness, for as much as that which is enclosed in crystal is visible, so the glory of the soul enclosed in the glorified body will not be hidden. But the first explanation is better, because it safeguards better the dignity of the glorified body, and is more consistent with the words of Gregory.

Reply to Objection 3: The glory of the body will not destroy nature but will perfect it. Wherefore the body will retain the color due to it by reason of the nature of its component parts, but in addition to this it will have clarity resulting from the soul's glory. Thus we see bodies which have color by their nature aglow with the resplendence of the sun, or from some other cause extrinsic or intrinsic.

Reply to Objection 4: Even as the clarity of glory will overflow from the soul into the body according to the mode of the body, and is there otherwise than in the soul, so again it will overflow into each part of the soul according to the mode of that part. Hence it is not unreasonable that the different parts should have clarity in different ways, according as they are differently disposed thereto by their nature. Nor is there any comparison with the other gifts of the body, for the various parts of the body are not differently disposed in their regard.

Whether the clarity of the glorified body is visible to the non-glorified eye?

Objection 1: It would seem that the clarity of the glorified body is invisible to the non-glorified eye. For the visible object should be proportionate to the sight. But a non-glorified eye is not proportionate to see the clarity of glory, since this differs generically from the clarity of nature. Therefore the clarity of the glorified body will not be seen by a non-glorified eye.

Objection 2: Further, the clarity of the glorified body will be greater than the clarity of the sun is now, since the clarity of the sun also will then be greater than it is now, according to Is. 30:26, and the clarity of the glorified body will be much greater still, for which reason the sun and the entire world will receive greater clarity. Now a non-glorified eye is unable to gaze on the very orb of the sun on account of the greatness of its clarity. Therefore still less will it be able to gaze on the clarity of a glorified body.

Objection 3: Further, a visible object that is opposite the eyes of the seer must needs be seen, unless there be some lesion to the eye. But the clarity of a glorified body that is opposite to

non-glorified eyes is not necessarily seen by them: which is evident in the case of the disciples who saw our Lord's body after the resurrection, without witnessing its clarity. Therefore this clarity will be invisible to a non-glorified eye.

On the contrary, A gloss on Phil. 3:21, "Made like to the body of His glory," says: "It will be like the clarity which He had in the Transfiguration." Now this clarity was seen by the non-glorified eyes of the disciples. Therefore the clarity of the glorified body will be visible to non-glorified eyes also.

Further, the wicked will be tortured in the judgment by seeing the glory of the just, according to Wis. 5:2. But they would not fully see their glory unless they gazed on their clarity. Therefore, etc.

I answer that, Some have asserted that the clarity of the glorified body will not be visible to the non-glorified eye, except by a miracle. But this is impossible, unless this clarity were so named equivocally, because light by its essence has a natural tendency to move the sight, and sight by its essence has a natural tendency to perceive light, even as the true is in relation to the intellect, and the good to the appetite. Wherefore if there were a sight altogether incapable of perceiving a light, either this sight is so named equivocally, or else this light is. This cannot be said in the point at issue, because then nothing would be made known to us when we are told that the glorified bodies will be lightsome: even so a person who says that a dog [*The dog star] is in the heavens conveys no knowledge to one who knows no other dog than the animal. Hence we must say that the clarity of a glorified body is naturally visible to the non-glorified eye.

Reply to Objection 1: The clarity of glory will differ generically from the clarity of nature, as to its cause, but not as to its species. Hence just as the clarity of nature is, by reason of its species, proportionate to the sight, so too will the clarity of glory be.

Reply to Objection 2: Just as a glorified body is not passible to a passion of nature but only to a passion of the soul [*Cf. Q[82], A[1]], so in virtue of its property of glory it acts only by the action of the soul. Now intense clarity does not disturb the sight, in so far as it acts by the action of the soul, for thus it rather gives delight, but it disturbs it in so far as it acts by the action of nature by heating and destroying the organ of sight, and by scattering the spirits* asunder. [*"Animalem," as though it were derived from "animus"---the mind. Cf. FS, Q[50], A[1] ,3m; FS, Q[52], A[1],3m.] Hence, though the clarity of a glorified body surpasses the clarity of the sun, it does not by its nature disturb the sight but soothes it: wherefore this clarity is compared to the jasper-stone (Apoc. 21:11).

Reply to Objection 3: The clarity of the glorified body results from the merit of the will and therefore will be subject to the will, so as to be seen or not seen according to its command. Therefore it will be in the power of the glorified body to show forth its clarity or to hide it: and this was the opinion of Praepositivus.

Whether a glorified body will be necessarily seen by a non-glorified body?

Objection 1: It would seem that a glorified body will be necessarily seen by a non-glorified body. For the glorified bodies will be lightsome. Now a lightsome body reveals itself and other things. Therefore the glorified bodies will be seen of necessity.

Objection 2: Further, every body which hides other bodies that are behind it is necessarily perceived by the sight, from the very fact that the other things behind it are hidden. Now the glorified

body will hide other bodies that are behind it from being seen, because it will be a colored body. Therefore it will be seen of necessity.

Objection 3: Further, just as quantity is something in a body, so is the quality whereby a body is seen. Now quantity will not be subject to the will, so that the glorified body be able to be of greater or smaller quantity. Therefore neither will the quality of visibility be subject to the will, so that a body be able not to be seen.

On the contrary, our body will be glorified in being made like to the body of Christ after the resurrection. Now after the resurrection Christ's body was not necessarily seen; in fact it vanished from the sight of the disciples at Emmaus (Lk. 24:31). Therefore neither will the glorified body be necessarily seen.

Further, there the body will be in complete obedience to the will. Therefore as the soul lists the body will be visible or invisible.

I answer that, A visible object is seen, inasmuch as it acts on the sight. Now there is no change in a thing through its acting or not acting on an external object. Wherefore a glorified body may be seen or not seen without any property pertaining to its perfection being changed. Consequently it will be in the power of a glorified soul for its body to be seen or not seen, even as any other action of the body will be in the soul's power; else the glorified body would not be a perfectly obedient instrument of its principal agent.

Reply to Objection 1: This clarity will be obedient to the glorified body so that this will be able to show it or hide it.

Reply to Objection 2: A body's color does not prevent its being transparent except in so far as it affects the sight, because the sight cannot be affected by two colors at the same time, so as to perceive them both perfectly. But the color of the glorified body will be completely in the power of the soul, so that it can thereby act or not act on the sight. Hence it will be in its power to hide or not to hide a body that is behind it.

Reply to Objection 3: Quantity is inherent to the glorified body itself, nor would it be possible for the quantity to be altered at the soul's bidding without the glorified body suffering some alteration incompatible with its impassibility. Hence there is no comparison between quantity and visibility, because even this quality whereby it is visible cannot be removed at the soul's bidding, but the action of that quality will be suspended, and thus the body will be hidden at the soul's command.

OF THE CONDITIONS UNDER WHICH THE BODIES OF THE DAMNED WILL RISE AGAIN (THREE ARTICLES)

We must next consider the conditions in which the bodies of the damned will rise again. Under this head there are three points of inquiry:

(1) Whether the bodies of the damned will rise again with their deformities?

(2) Whether their bodies will be corruptible?

(3) Whether they will be impassible?

Whether the bodies of the damned will rise again with their deformities?

Objection 1: It would seem that the bodies of the damned will rise again with their deformities. For that which was appointed as a punishment for sin should not cease except the sin be forgiven. Now the lack of limbs that results from mutilation, as well as all other bodily deformities, are appointed as punishments for sin. Therefore these deformities will not be taken away from the damned, seeing that they will not have received the forgiveness of their sins.

Objection 2: Further, just as the saints will rise again to final happiness, so the wicked will rise again to final unhappiness. Now when the saints rise again nothing will be taken from them that can pertain to their perfection, therefore nothing pertaining to the defect or unhappiness of the wicked will be taken from them at the resurrection. But such are their deformities. Therefore, etc.

Objection 3: Further, just as deformity is a defect of the passible body, so is slowness of movement. Now slowness of movement will not be taken from the bodies of the damned at the resurrection, since their bodies will not be agile. Therefore for the same reason neither will their deformity be taken away.

On the contrary, It is written (1 Cor. 15:52): "The dead shall rise again incorruptible"; where a gloss says: "The dead, i.e. sinners, or all the dead in general shall rise again incorruptible, i.e. without the loss of any limbs." Therefore the wicked will rise again without their deformities.

Further, there will be nothing in the damned to lessen the sense of pain. But sickness hinders the sense of pain by weakening the organ of sense, and in like manner the lack of a limb would prevent pain from affecting the whole body. Therefore the damned will rise again without these defects.

I answer that, Deformity in the human body is of two kinds. One arises from the lack of a limb: thus we say that a mutilated person is deformed, because he lacks due proportion of the parts to the whole. Deformities of this kind, without any doubt, will not be in the bodies of the damned, since all bodies of both wicked and good will rise again whole. Another deformity arises from the undue disposition of the parts, by reason of undue quantity, quality, or place---which deformity is, moreover, incompatible with due proportion of parts to whole. Concerning these deformities and like defects such as fevers and similar ailments which sometimes result in deformity, Augustine remained undecided and doubtful (Enchiridion xcii) as the Master remarks (Sent. iv, D, 44). Among modern masters, however, there are two opinions on this point. For some say that such like deformities and defects will remain in the bodies of the damned, because they consider that those who are damned are sentenced to utmost unhappiness wherefrom no affliction should be rebated. But this would seem unreasonable. For in the restoration of the rising body we look to its natural perfection rather than to its previous condition: wherefore those who die under perfect age will rise again in the stature of youth, as stated above (Q[81], A[1]). Consequently those who had natural defects in the body, or deformities resulting therefrom, will be restored without those defects or deformities at the resurrection, unless the demerit of sin prevent; and so if a person rise again with such defects and deformities, this will be for his punishment. Now the mode of punishment is according to the measure of guilt. And a sinner who is about to be damned may be burdened with less grievous sins and yet have deformities and defects which one who is about to be damned has not, while burdened with more grievous sins. Wherefore if he who had deformities in this life rise again with them, while the other who had them not in this life, and therefore, as is clear, will rise again without them, though deserving of greater punishment, the mode of the punishment would not correspond to the amount of guilt; in fact it would seem that a man is more punished on account of the pains which he suffered in this world; which is absurd.

Hence others say with more reason, that He Who fashioned nature will wholly restore the body's nature at the resurrection. Wherefore whatever defect or deformity was in the body through corruption, or weakness of nature or of natural principles (for instance fever, purblindness, and so forth) will be entirely done away at the resurrection: whereas those defects in the human body which are the natural result of its natural principles, such as heaviness, passibility, and the like, will be in the bodies of the damned, while they will be removed from the bodies of the elect by the glory of the resurrection.

Reply to Objection 1: Since in every tribunal punishment is inflicted according to the jurisdiction of the tribunal, the punishments which in this temporal life are inflicted for some particular sin are themselves temporal, and extend not beyond the term of this life. Hence although the damned are not pardoned their sins, it does not follow that there they will undergo the same punishments as they have in this world: but the Divine justice demands that there they shall suffer more severe punishment for eternity.

Reply to Objection 2: There is no parity between the good and the wicked, because a thing can be altogether good, but not altogether evil. Hence the final happiness of the saints requires that they should be altogether exempt from all evil; whereas the final unhappiness of the wicked will not exclude all good, because "if a thing be wholly evil it destroys itself," as the Philosopher says (Ethic. iv, 5). Hence it is necessary for the good of their nature to underlie the unhappiness of the damned, which good is the work of their perfect Creator, Who will restore that same nature to the perfection of its species.

Reply to Objection 3: Slowness of movement is one of those defects which are the natural result of the principles of the human body; but deformity is not, and consequently the comparison fails.

Whether the bodies of the damned will be incorruptible?

Objection 1: It would seem that the bodies of the damned will be corruptible. For everything composed of contraries must necessarily be corruptible. Now the bodies of the damned will be composed of the contraries whereof they are composed even now, else they would not be the same, neither specifically nor, in consequence, numerically. Therefore they will be corruptible.

Objection 2: Further, if the bodies of the damned will not be corruptible, this will be due either to nature, or to grace, or to glory. But it will not be by nature, since they will be of the same nature as now; nor will it be by grace or glory, since they will lack these things altogether. Therefore they will be corruptible.

Objection 3: Further, it would seem inconsistent to withdraw the greatest of punishments from those who are in the highest degree of unhappiness. Now death is the greatest of punishments, as the Philosopher declares (Ethic. iii, 6). Therefore death should not be withdrawn from the damned, since they are in the highest degree of unhappiness. Therefore their bodies will be corruptible.

On the contrary, It is written (Apoc. 9:6): "In those days men shall seek death, and shall not find it, and they shall desire to die, and death shall fly from them."

Further, the damned will be punished with an everlasting punishment both in soul and body (Mat. 25:46): "These shall go into everlasting punishment." But this would not be possible if their bodies were corruptible. Therefore their bodies will be incorruptible.

I answer that, Since in every movement there must needs be a principle of movement, movement or change may be withdrawn from a movable in two ways: first through absence of a principle of movement, secondly through an obstacle to the principle of movement. Now corruption is a kind of change: and consequently a body which is corruptible on account of the nature of its principles may be rendered incorruptible in two ways. First by the total removal of the principle which leads to corruption, and in this way the bodies of the damned will be incorruptible. For since the heaven is the first principle of alteration in virtue of its local movement, and all other secondary agents act in virtue thereof and as though moved thereby, it follows that at the cessation of the heavenly movement there is no longer any agent that can change the body by altering it from its natural property. Wherefore after the resurrection, and the cessation of the heavenly movement, there will be no quality capable of altering the human body from its natural quality. Now corruption, like generation, is the term of alteration. Hence the bodies of the damned will be incorruptible, and this will serve the purpose of Divine justice, since living for ever they will be punished for ever. This is in keeping with the demands of Divine justice, as we shall state further on (A[3]), even as now the corruptibility of bodies serves the purpose of Divine providence, by which through the corruption of one thing another is generated.

Secondly, this happens through the principle of corruption being hindered, and in this way the body of Adam was incorruptible, because the conflicting qualities that exist in man's body were withheld by the grace of innocence from conducing to the body's dissolution: and much more will they be withheld in the glorified bodies, which will be wholly subject to the spirit. Thus after the general resurrection the two aforesaid modes of incorruptibility will be united together in the bodies of the blessed.

Reply to Objection 1: The contraries of which bodies are composed are conducive to corruption as secondary principles. For the first active principle thereof is the heavenly movement: wherefore given the movement of the heaven, it is necessary for a body composed of contraries to be corrupted unless some more powerful cause prevent it: whereas if the heavenly movement be withdrawn, the contraries of which a body is composed do not suffice to cause corruption, even in accordance with nature, as explained above. But the philosophers were ignorant of a cessation in the heavenly movement; and consequently they held that a body composed of contraries is without fail corrupted in accordance with nature.

Reply to Objection 2: This incorruptibility will result from nature, not as though there were some principle of incorruption in the bodies of the damned, but on account of the cessation of the active principle of corruption, as shown above.

Reply to Objection 3: Although death is simply the greatest of punishments, yet nothing prevents death conducing, in a certain respect, to a cessation of punishments; and consequently the removal of death may contribute to the increase of punishment. For as the Philosopher says (Ethic. ix, 9), "Life is pleasant to all, for all desire to be . . . But we must not apply this to a wicked or corrupt life, nor one passed in sorrow." Accordingly just as life is simply pleasant, but not the life that is passed in sorrows, so too death, which is the privation of life, is painful simply, and the greatest of punishments, inasmuch as it deprives one of the primary good, namely being, with which other things are withdrawn. But in so far as it deprives one of a wicked life, and of such as is passed in sorrow, it is a remedy for pains, since it puts an end to them. and consequently the withdrawal of death leads to the increase of punishments by making them everlasting. If however we say that death is penal by reason of the bodily pain which the dying feel, without doubt the damned will

continue to feel a far greater pain: wherefore they are said to be in "everlasting death," according to the Psalm (48:15): "Death shall feed upon them."

Whether the bodies of the damned will be impassible?

Objection 1: It would seem that the bodies of the damned will be impassible. For, according to the Philosopher (Topic. vi), "increase of passion results in loss of substance." Now "if a finite thing be continually lessened, it must needs at length be done away" (Phys. i, 4). Therefore if the bodies of the damned will be passible, and will be ever suffering, they will at length be done away and corrupted: and this has been shown to be false (A[2]). Therefore they will be impassible.

Objection 2: Further, every agent likens the patient to itself. If then the bodies of the damned are passive to the fire the fire will liken them to itself. Now fire does not consume bodies except in so far as in likening them to itself it disintegrates them. Therefore if the bodies of the damned will be passible they will at length be consumed by the fire, and thus the same conclusion follows as before.

Objection 3: Further, those animals, for instance the salamander, which are said to remain living in fire without being destroyed, are not distressed by the fire: because an animal is not distressed by bodily pain, unless the body in some way is hurt thereby. If therefore the bodies of the damned can, like the aforesaid animals, remain in the fire without being corrupted, as Augustine asserts (De Civ. Dei xxi, 2,4), it would seem that they will suffer no distress there: which would not be the case unless their bodies were impassible. Therefore, etc.

Objection 4: Further, if the bodies of the damned be passible, the pain resulting from their suffering, seemingly, will surpass all present bodily pain, even as the joy of the saints will surpass all present joy. Now in this life it sometimes happens that the soul is severed from the body through excess of pain. Much more therefore if those bodies will be passible, the souls will be separate from the bodies through excess of pain, and thus those bodies will be corrupted: which is false. Therefore those bodies will be impassible.

On the contrary, It is written (1 Cor. 15:52): "And we shall be changed": and a gloss says: "We---the good alone---will be changed with the unchangeableness and impassibility of glory."

Further, even as the body co-operates with the soul in merit, so does it co-operate in sin. Now on account of the former co-operation not only the soul but also the body will be rewarded after the resurrection. Therefore in like manner the bodies of the damned will be punished; which would not be the case were they impassible. Therefore they will be passible.

I answer that, The principal cause of the bodies of the damned not being consumed by fire will be the Divine justice by which their bodies will be consigned to everlasting punishment. Now the Divine justice is served also by the natural disposition, whether on the part of the passive body or on the part of the active causes; for since passiveness is a kind of receptiveness, there are two kinds of passion, corresponding to two ways in which one thing is receptive of another. For a form may be received into a subject materially according to its natural being, just as the air receives heat from fire materially; and corresponding to this manner of reception there is a kind of passion which we call "passion of nature." In another way one thing is received into another spiritually by way of an "intention," just as the likeness of whiteness is received into the air and in the pupil: this reception is like that whereby the soul receives the likeness of things: wherefore corresponding to

this mode of reception is another mode of passion which we call "passion of the soul." Since therefore after the resurrection and the cessation of the heavenly movement it will be impossible for a body to be altered by its natural quality, as stated above (A[2]), it will not be possible for any body to be passive with a passion of nature. Consequently as regards this mode of passion the bodies of the damned will be impassible even as they will be incorruptible. Yet after the heaven has ceased to move, there will still remain the passion which is after the manner of the soul, since the air will both receive light from the sun, and will convey the variety of colors to the sight. Wherefore in respect of this mode of passion the bodies of the damned will be passible. But the glorified bodies, albeit they receive something, and are in a manner patient to sensation, will nevertheless not be passive, since they will receive nothing to distress or hurt them, as will the bodies of the damned, which for this reason are said to be passible.

Reply to Objection 1: The Philosopher is speaking of the passion whereby the patient is changed from its natural disposition. But this kind of passion will not be in the bodies of the damned, as stated above.

Reply to Objection 2: The likeness of the agent is in the patient in two ways. First, in the same way as in the agent, and thus it is in all univocal agents, for instance a thing that is hot makes another thing hot, and fire generates fire. Secondly, otherwise than in the agent, and thus it is in all equivocal agents. In these it happens sometimes that a form which is in the agent spiritually is received into the patient materially: thus the form of the house built by the craftsman is materially in itself, but spiritually in the mind of the craftsman. On the other hand, sometimes it is in the agent materially, but is received into the patient spiritually: thus whiteness is materially on the wall wherein it is received, whereas it is spiritually in the pupil and in the transferring medium. And so it is in the case at issue, because the species which is in the fire materially is received spiritually into the bodies of the damned; thus it is that the fire will assimilate the bodies of the damned to itself, without consuming them withal.

Reply to Objection 3: According to the Philosopher (De Prop. Element.), "no animal can live in fire." Galen also (De simp. medic.) says "that there is no body which at length is not consumed by fire"; although sometimes certain bodies may remain in fire without hurt, such as ebony. The instance of the salamander is not altogether apposite, since it cannot remain in the fire without being at last consumed, as do the bodies of the damned in hell. Nor does it follow that because the bodies of the damned suffer no corruption from the fire, they therefore are not tormented by the fire, because the sensible object has a natural aptitude to please or displease the senses, not only as regards its natural action of stimulating or injuring the organ, but also as regards its spiritual action: since when the sensible object is duly proportionate to the sense, it pleases, whereas the contrary is the result when it is in excess or defect. Hence subdued colors and harmonious sounds are pleasing, whereas discordant sounds displease the hearing.

Reply to Objection 4: Pain does not sever the soul from the body, in so far as it is confined to a power of the soul which feels the pain, but in so far as the passion of the soul leads to the body being changed from its natural disposition. Thus it is that we see that through anger the body becomes heated, and through fear, chilled: whereas after the resurrection it will be impossible for the body to be changed from its natural disposition, as stated above (A[2]). Consequently, however great the pain will be, it will not sever the body from the soul.
